

TYPE 21S SUPPORTING

TYPE 21S SUPPORTING CABLE TIES

The new 2017 National Electrical Code (NEC) now permits UL Type 21S certified cable ties to be used as Supporting Devices in electrical installations.

Type 21S Supporting Device classification certifies products for their suitability in providing primary support for flexible conduits, tubing, and cables in accordance with the maximum spacing intervals when specified in the relevant national installation codes, such as the 2017 National Electrical Code (NEC) and the 2015 Canadian Electrical Code (CEC).

Please notify installers to retain the product package. Electrical inspectors will review the packaging for the UL Type 21S Supporting Device certification symbol.

ACT is Type 21S certified for 50 lb-f and 120 lb-f Natural, Burgundy, Colors and UV Black cable ties. ACT continually strives to provide you with products that are certified to the highest industry standards.
